Dear Jim,

Your Announcement #13 was a very useful information sheet. I have made up the enclosed charts using your data and an AAVSO chart. I estimated the nova at 5.9 on July 16 and 5.7 on July 28.

I would like to draw your attention to column 3 - star RA 20h 43m 11s Dec $17^{\circ}54.4'$ mag 5.6. This star is the variable U Delphini as you will notice on the charts. It varies from 5.6-7.5 irregularly. I hope this does not cause confusion amongst observers who may be using the mag as 5.6 as per Announc. #13.

I'll keep in touch

Best wishes

Terry Dickinson
